Sequence

A reusable presentation system — eleven layouts, one theme, everything editable

Agenda

- What the system is
- Layouts and when to use each
- Theme, colour and type
- Charts and tables
- How to extend it

11

reusable layouts

Every layout carries its own placeholders, so new slides inherit position, weight and colour automatically.

01 The layout system

Three kinds of slide carry most decks

01

Argue

A claim in the title, evidence underneath. The title is the message, not a label for the contents.

02

Show

A chart or table with commentary beside it, so the reader knows what to look at before they look.

03

Turn

A divider that resets attention between topics and tells the room where it is.

Where deck time actually goes

68%

of slide time is spent on formatting, not thinking

4.2x

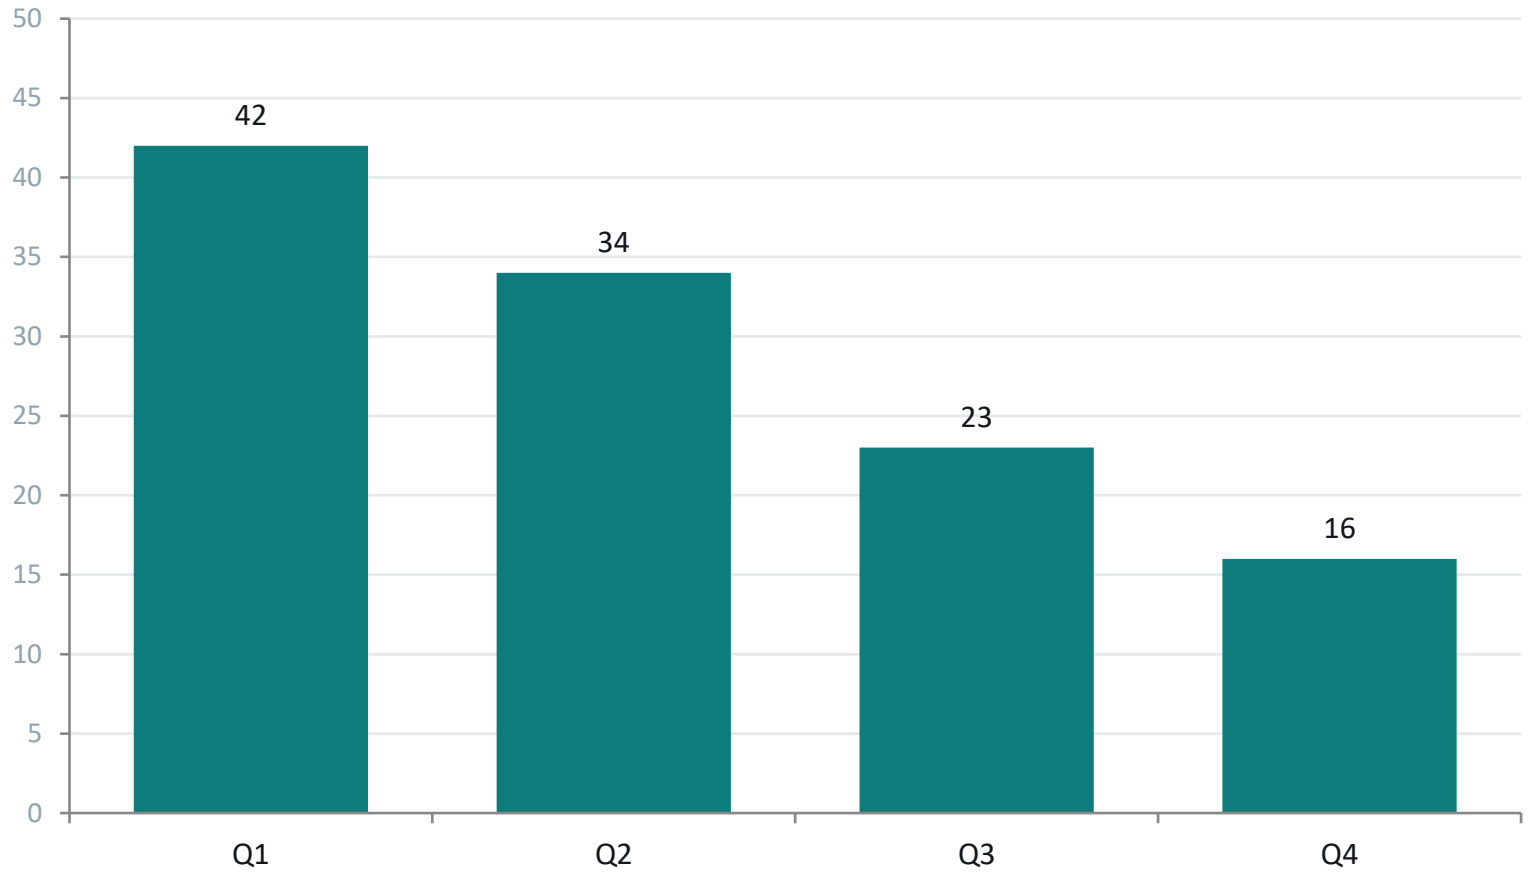

faster to produce when layouts carry the styling

1

theme file controls every colour in the deck

Figures are illustrative placeholders for the template demo.

Quarterly close effort falls as layouts take over

What to read here

Effort per deck drops as formatting moves out of the slide and into the layout.

The fall is steepest once the chart and table styling is standardised in Q3.

Illustrative data for the template demo.

How a slide gets made

01 **Pick the layout** — Choose the frame that matches the job of the slide.

02 **Fill placeholders** — Type into named regions; styling is already decided.

03 **Compose on top** — Add cards, stats or a chart in scheme colours.

04 **Check the theme** — One file changes every colour across the deck.

Loose slides versus a system

Loose slides

- Styling re-decided every slide
- Colour changes are manual, slide by slide
- Charts drift apart visually
- New contributors guess the rules

A system

- Layouts carry position and weight
- One theme file drives every colour
- Charts share one label treatment
- New contributors inherit the rules

Layout reference

Layout	Use it for	Placeholders
Cover	Opening slide	title, body
Section	Resetting attention between topics	body (number), title
Agenda	Previewing the sections	title, body
Title only	Any composed content slide	title
Two column	Text beside an image or list	title, body, chart
Stat	Two to three headline figures	title
Chart + commentary	A chart that needs interpreting	title, chart, body
Workflow	Sequential steps	title
Comparison	Before and after, or option A and B	title
Table	Dense reference data	title
Closing	Decision and next steps	title, body

Everything here stays editable

Text, shapes, tables and charts are native PowerPoint objects. Swap the theme and the whole deck follows.
